## EDUCATION

|                                                                                                                                                                                                                                                            |                                             |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------|
| <b>Indiana University</b><br><i>Accelerated M.S. in Computer Science — GPA: 4.00/4.00</i>                                                                                                                                                                  | Bloomington, IN<br><i>Expected May 2027</i> |
| <b>Indiana University</b><br><i>B.S. in Computer Science, B.S. in Mathematics — GPA: 3.93/4.00</i> <ul style="list-style-type: none"><li>Hutton Honors College; Dean's List (5x); Cox, Luddy, Founder's &amp; Provost Scholar; VP of Hiking Club</li></ul> | Bloomington, IN<br><i>May 2026</i>          |

## EXPERIENCE

|                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                               |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------|
| <b>Software Engineering Intern</b><br><i>Uber</i> <ul style="list-style-type: none"><li>Owned a system end-to-end tracking 160+ reliability metrics, improving observability and catching regressions</li><li>Built Claude AI agent tools and integrations that streamlined developer workflows, cutting flagged issues 90%</li><li>Developed backend services on Fares (Java, Python, Go), a Tier-0 system serving millions of riders and drivers</li></ul> | May 2026 – Aug. 2026<br><i>Sunnyvale, CA</i>  |
| <b>Software Engineering Intern</b><br><i>Allied Solutions</i> <ul style="list-style-type: none"><li>Engineered a serverless AWS document pipeline (Lambda, DynamoDB, API Gateway), saving \$64k+ annually</li><li>Modernized legacy C# .NET and SQL Server code, improving performance for a database serving 1,000+ banks</li></ul>                                                                                                                         | May 2025 – Aug. 2025<br><i>Carmel, IN</i>     |
| <b>Software Engineer, Co-Founder</b><br><i>Lawgic Prep — Gamified LSAT Practice, Official LSAC Licensee</i> <ul style="list-style-type: none"><li>Built an EdTech platform (React, Python, Google Cloud, Stripe) with an AI essay grader and 900K+ applications</li><li>Secured a rare official LSAC license (&lt;100 globally) and negotiated pre-law sponsorships for early adoption</li></ul>                                                             | Nov. 2024 – Present<br><i>Bloomington, IN</i> |
| <b>Peer Academic Coach, Data Analyst</b><br><i>Indiana University Advising and Major Exploration Services</i> <ul style="list-style-type: none"><li>Raised advising service usage 40%+ using Tableau, Excel, and Python analysis; presented at campus symposium</li></ul>                                                                                                                                                                                    | Aug. 2023 – Present<br><i>Bloomington, IN</i> |

## PROJECTS

|                                                                                                                                                                                                                                                                                                                                                                             |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Distributed Crypto Limit Order Book Pipeline</b>   <i>Kafka, Spark, Docker, Python</i> <ul style="list-style-type: none"><li>Engineered a distributed Kafka-to-Spark pipeline (Dockerized) processing 50k+ events/sec; best of ~30 in class</li><li>Built concurrent Python ingestion normalizing Binance, Coinbase, and Kraken APIs for real-time order books</li></ul> |
| <b>Graph Anomaly Detector</b>   <i>Python, scikit-learn, NetworkX, PyVis</i> <ul style="list-style-type: none"><li>Built an ML pipeline flagging suspicious accounts via IsolationForest over PageRank and Louvain features</li><li>Ingested live Reddit and X graphs; scored precision/recall/F1 and visualized them in an interactive PyVis app</li></ul>                 |

## RESEARCH

|                                                                                                                                                                                                                                                                                                                                                                             |                                                 |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------|
| <b>Undergraduate Researcher</b><br><i>Math Cancer Research Lab — PhysiCell Project</i> <ul style="list-style-type: none"><li>Used numerical analysis in Python and C++ to solve diffusion, reducing complexity from <math>O(n^3)</math> to <math>O(n)</math></li><li>Parallelized routines with CUDA and OpenMP, speeding up large-scale simulations by over 300%</li></ul> | Aug. 2024 – Dec. 2025<br><i>Bloomington, IN</i> |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------|

## LEADERSHIP

|                                                                                                                                                                                                                                                                                                                                        |                                               |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------|
| <b>Vice President of Technology</b><br><i>Aperture Partners</i> <ul style="list-style-type: none"><li>Lead a team of 20 building client-facing, paid products, including engagements for Fortune 500 companies</li><li>Run AI-fluency workshops teaching modern AI tools and workflows across a 100-person organization</li></ul>      | July 2026 – Present<br><i>Bloomington, IN</i> |
| <b>Director of Technology</b><br><i>Fintech at Indiana University</i> <ul style="list-style-type: none"><li>Built a JavaScript/SQLite Discord bot with real-time APIs for the club fund, logging 400+ interactions</li><li>Teach computer science and quantitative finance to 265+ members from diverse academic backgrounds</li></ul> | Aug. 2024 – Present<br><i>Bloomington, IN</i> |

## TECHNICAL SKILLS

**Languages:** Java, Python, Go, C++, C, JavaScript/Node.js, SQL  
**AI/ML:** PyTorch, scikit-learn, NumPy, Pandas, Claude agent skills, ML pipelines, feature engineering  
**Infrastructure:** distributed systems, GCP, AWS, Docker, Kafka, Spark, CI/CD, Linux, multi-threading  
**Coursework:** Advanced Algorithms, Data Structures, Machine Learning, Operating Systems, Discrete Math
